             <li> image tag : <p> It is used to insert an image within an HTML
document.</p>
            <p> for eg. <img src="html.png" height="200" ></p> </li>
            <p> table data(td) : It is used to define cells of an HTML table
which contains table data.</p>
            <p> table head(th) : It defines the head cell of an HTML. </p>
            <P> table row(tr) : It defines the row cells in an HTML table.</P>
            <p> for eg. <table border="4" width="50%">
              <tr>
                  <th> name </th>
```

```
                    <th> roll no </th>
            </tr>
            <tr>
                <td> ram </td>
                <td> 01 </td>
                <tr>
                    <td> shyam </td>
                    <td> 02 </td>
                </tr>
            </tr>
        </table>
            </p>
        </li>
</ul></html>
```

OUTPUT

INTRODUCTION

HTML stands for hypertext markup language. It is used to design web pages using a markup language.

- anchor tag :

  This tag is used for link.

  for eg. [visit our website](#)

- list tag :

  If you want to enter the contents in the listed order, then use this tag. There are two types of lists.

- ordered list :

  The list will be in sequence.

  for eg.

   1. apple
    2. blue

- unordered list :

  In this list the order will not in sequence.

  for eg.

    ○ mango
    ○ guava

- image tag :

It is used to insert an image within an HTML document.

for eg.

table data(td) : It is used to define cells of an HTML table which contains table data.

table head(th) : It defines the head cell of an HTML.

table row(tr) : It defines the row cells in an HTML table.

for eg.

name	roll no
ram	01
shyam	02
